

EPORITE

EPORITE 3806-8 A / B

GENERAL

EPORITE 3806-8 A / B is a two-components epoxy coating system which is recommended as the primer for fiber reinforced composite or metal.

The cured coating exhibits very good adhesive strength and excellent impact resistance.

STORAGE

Store A & B parts at temperature lower than 30°C but not less than 5°C. Keep the containers at dry place & sealed tightly (especially B part).

HANDLING AND SAFETY

Gloves and glasses are suggested for user's personal protection. Clean with soap and water when skin contact.

PROCESSING

1. Well mixed with mixing ratio A:B = 100:25 by weight. Dilute with suitable solvent.
2. Spray coating with curing condition 80 ~ 100°C/0.5 ~ 1 hr.

NOTE: The process can be adjusted according to the specific manufacturing process or performance requirement.

SPECIFICATION

Specification	EPORITE3806-8A	EPORITE 3806-8B
Chemical Type	Epoxy Resin	Polyamide
Appearance	Black Paste	Light Yellow Liquid
Specific Gravity	1.5 ± 0.2	0.9 ± 0.1
Viscosity (25°C)	15000 ± 6000 cps	100 ± 50 cps
Mixing Ratio (by weight)	100	25
Shelf Life (25°C)	6 months	6 months
Mixing Viscosity (25°C)	1600 ± 400 cps	
Pot Life (25°C)	> 120 min/500 g	
Gel Time (80°C)	10 min/0.2 g (thin coating)	
Curing Condition	80 ~ 100°C/0.5 ~ 1 hr	

PROPERTIES OF THE CURED RESIN

Property	EPORITE 3806-8 A / B
Hardness (Shore D)	75~ 85
Glass Transition Temperature (°C)	40 ~ 60
Coefficient of Thermal Expansion (mm/ mm/°C)	(α_1) 40 ~ 60×10 ⁻⁶ (α_2) 120 ~ 180×10 ⁻⁶
Moisture absorption (wt %)	< 0.5
Impact Test (30 cm)	Pass
